Scope

This document resolves supported mobile devices for the following Fiserv mobile banking solutions: Configure Digital, Create Digital, Mobiliti ASP and Mobiliti Business ASP.

Fiserv uses a formal process for assuring optimal usability of mobile banking apps across a broad range of devices in the US market. The Mobile Banking Supported Device List outlines support for devices that mobile banking users are currently using and the devices we predict they will begin using between now and the next update to this document.

Mobile Banking Support Device List Criteria:

1. Include the 70% most used devices based on actual mobile banking user connections for the solutions noted above.
2. Include new devices released or soon to be released that are expected to attain significant utilization.
3. Exclude older device models when actual user connections on that model are very low and/or the device no longer runs a minimum supported OS version.

This document lists devices supported for versions of Fiserv mobile banking app versions released after the effective date of this document. App versions with release dates that predate the effective date of the document and/or predate the date new devices are added may not support all listed devices.

Devices not listed/no longer listed may function; however, they are not explicitly supported. Some devices not explicitly tested or listed as supported may still function as intended with the mobile banking apps, however, there is no guarantee that they will.

For a particular mobile device model, a manufacturer may provide different versions of hardware, firmware, and operating system (OS) software. This practice is common, particularly for phones that are released into different geographic territories. These different versions of the same phone model may operate differently from the model version that has been assessed for the purposes of its inclusion in this document and may not perform as expected.

Note: Some features that are described in this document may not be available to every financial institution or mobile banking solution. Feature availability depends on the financial institution's mobile banking solution, host, core, online banking solution, implementation configuration and/or service package.

Tablet Support

Note: Not all Fiserv mobile banking solutions offer apps optimized for the tablet form factor.

The tablet market is consolidated around a small number of form factors, screen resolutions, and chipsets. A device may be included in the Mobile Banking Supported Device List as for tablet apps if it meets the following criteria in addition to the criteria 1 – 3 above:

1. Apple: Apple iPad devices are included in the list.
2. Android: The device has a minimum screen size of 7" diagonal. Devices with screen sizes below 7" are supported by the phone channel. The device supports the Google Play store.

Operating Systems, Hardware, Browsers and Channels

Minimum Device Operating System Support

Minimum Android Version Supported - Android 11.0

Minimum iOS Versions Supported – iOS 15, iPadOS 15

To ensure the highest levels of security, devices that are not eligible for upgrade to at least the minimum supported OS version are prevented from installing and/or using the mobile banking app.

Operating system updates made generally available by Apple and Google at the time of publication of this document are supported by app versions released after the effective date of this document. Only devices running an unmodified version of the manufacturer-supplied operating system are supported.

Note: Beta releases of Apple and Android operating systems are not supported.

Hardware, Browsers, and Channel Support

- Mobile Banking does not support the use of the Android “Developer options” settings, including USB Debugging
- Jailbroken/rooted devices and MITM interception are not supported
- The latest stable versions of Chrome and Safari browsers are supported. Beta versions of browsers are not supported
- The SMS channel is only supported on devices with SMS capabilities

Supported App Stores

- iTunes App Stores (Apple app store)
- Google Play (Android app store)

Network Support

Mobile Banking only supports TLS 1.2 for app communications. Any device or browser that does not support TLS 1.2 will not be able to connect to Mobile Banking services—even if the device is on a supported operating system version. This is being enforced to comply with security mandates from regulatory authorities and ensures secure communications for mobile banking users.

The Mobile banking products can operate on any unrestricted TCP/IP data network. Operation on restricted networks (for example, where a firewall might be in place) is not guaranteed.

The Mobile banking product supports Tier 1 carriers in the U.S., including AT&T®, Verizon®, T-Mobile®/Sprint®, and US Cellular®. Mobile banking support for non-Tier 1 carriers depends on the contractual agreement between the SMS gateway provider (aggregator) and the individual carrier.
